

OASIS

Information Secured 

The energy industry leading provider for **Information Management**

- » Preserve and maximise the value of all record types
- » Manage records using industry standard data taxonomies
- » Control and reduce your information management costs
- » Comply with regulatory requirements

Maximising Data Value

Expert Team Members taking care of your comprehensive data management strategy.

Our Team Members and their underpinning knowledge will help unlock the value of your data through data audits. With an improved understanding of your record holdings, we enable regulatory compliance and can deliver data rationalisation, complying with your internal governance and reducing ongoing storage costs by securely destroying unneeded or digitised data.

Secure Data Storage

Purpose built record centre facilities for storing and viewing your assets.

At OASIS we have decades of experience managing physical and digital information for our energy clients. We have watched the energy industry evolve information systems from physical records to digitised documents to knowledge management platforms to data lakes and data mesh. We understand the complexities of managing your various assets including paper, tape, electronic documents, core, cuttings and fluid samples.

Simplify the complexities of data management

Our cloud-based platform solution, Plexus, is designed to optimise the value of your data, while mitigating capital and operational costs.

Simplify the complexities of managing ever-expanding volumes of different types of physical and electronic assets and associated metadata, using Plexus. Our cloud-based data management portal solves your data management challenges quickly, efficiently, and cost-effectively, providing easy, fast and focused access to the important subsurface geoscience assets needed to perform your daily tasks.

Data cataloguing

Who wants to spend more time looking for data than analysing it? OASIS Group offers data cataloguing services that makes data asset discovery straightforward. Surfaced through our Plexus user interface, with both tabular and map-based capabilities, our taxonomies make finding data simple.

Secure scanning & digitisation services

Be dynamic with your data. OASIS is proud to offer 'best of breed' technologies for all your digitisation and data capture needs.

When you live in a hybrid world of paper and electronic information without a unified view of your information, you and your employees spend precious time searching for what you need and risk making critical decisions without all the facts. Document digitisation is a great way of unlocking valuable knowledge and preserving paper documentation in a compliant manner. We provide a range of document scanning and data capture services within a highly secure environment using best of breed technologies for speed, quality and high levels of accuracy.

Our scanning solutions can digitise important information for quick, searchable, machine readable and secure access for your entire organisation, paramount in a hybrid workplace. Converting documents to digital formats enables you to easily access and share digital versions throughout the organisation, improving business processes and providing you secure access to your critical data.
