Information Secured 

## DATA DECOMMISSIONING

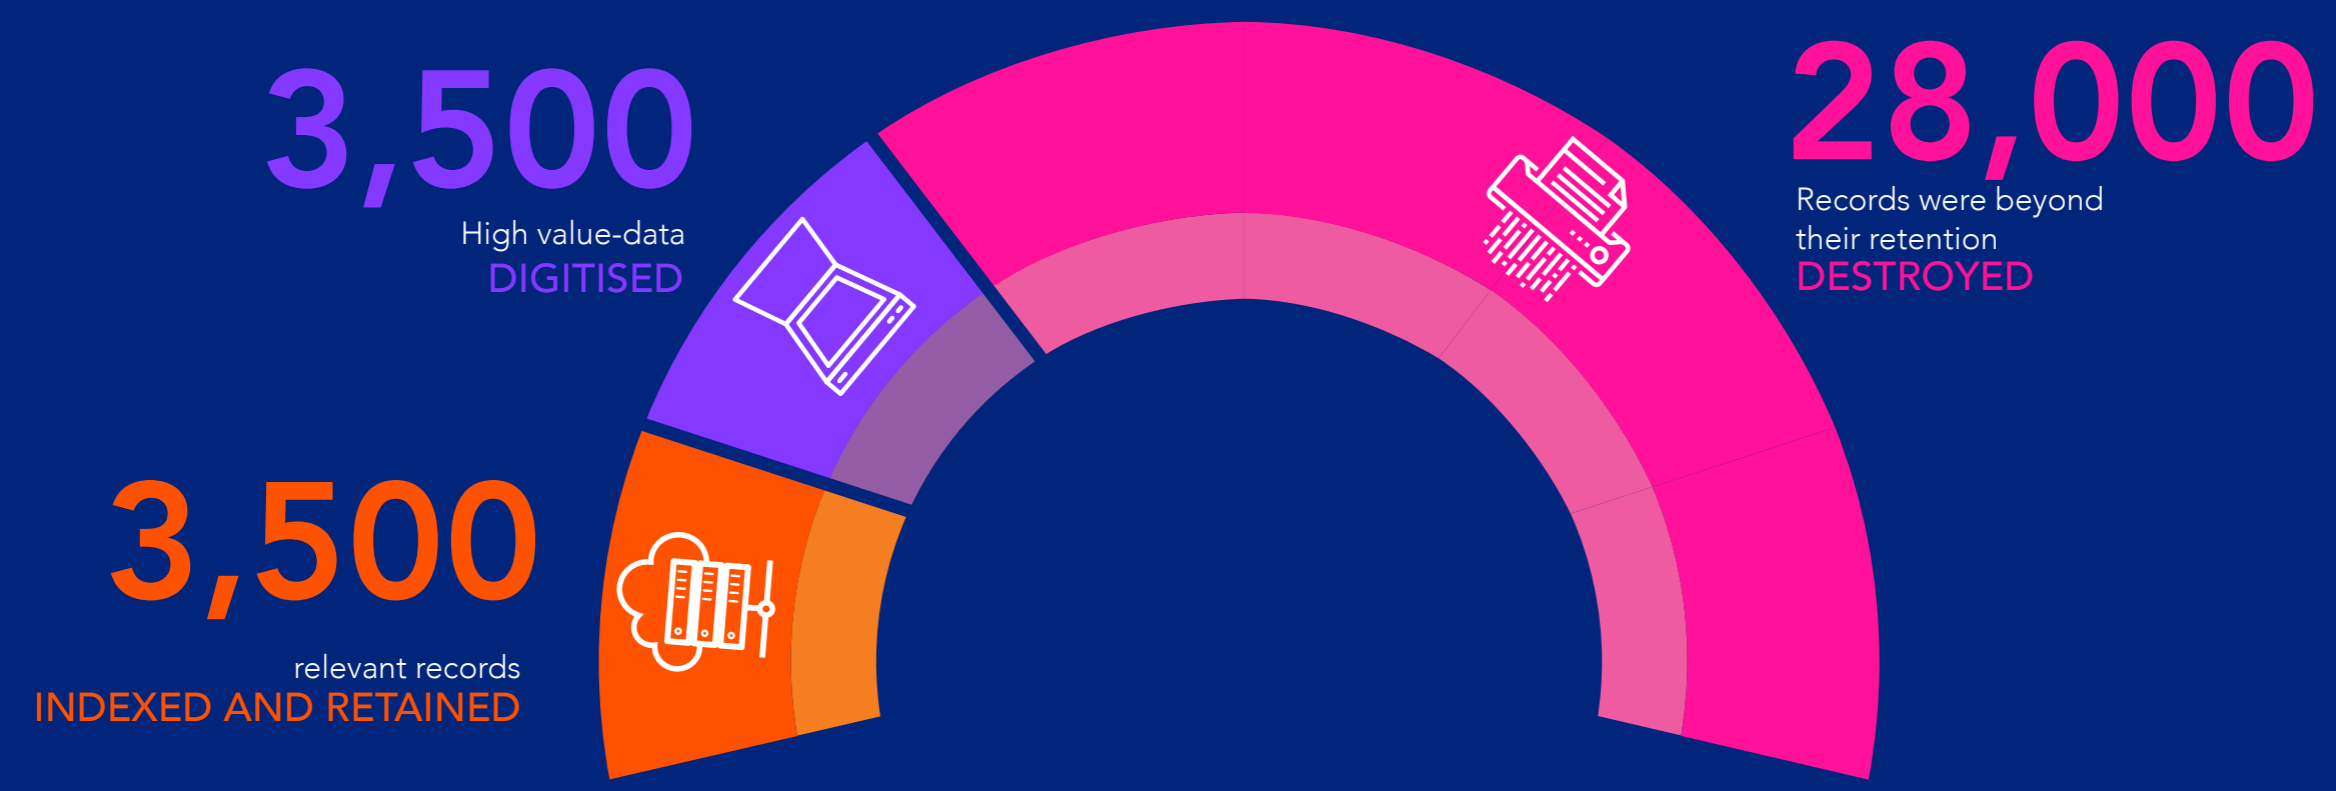

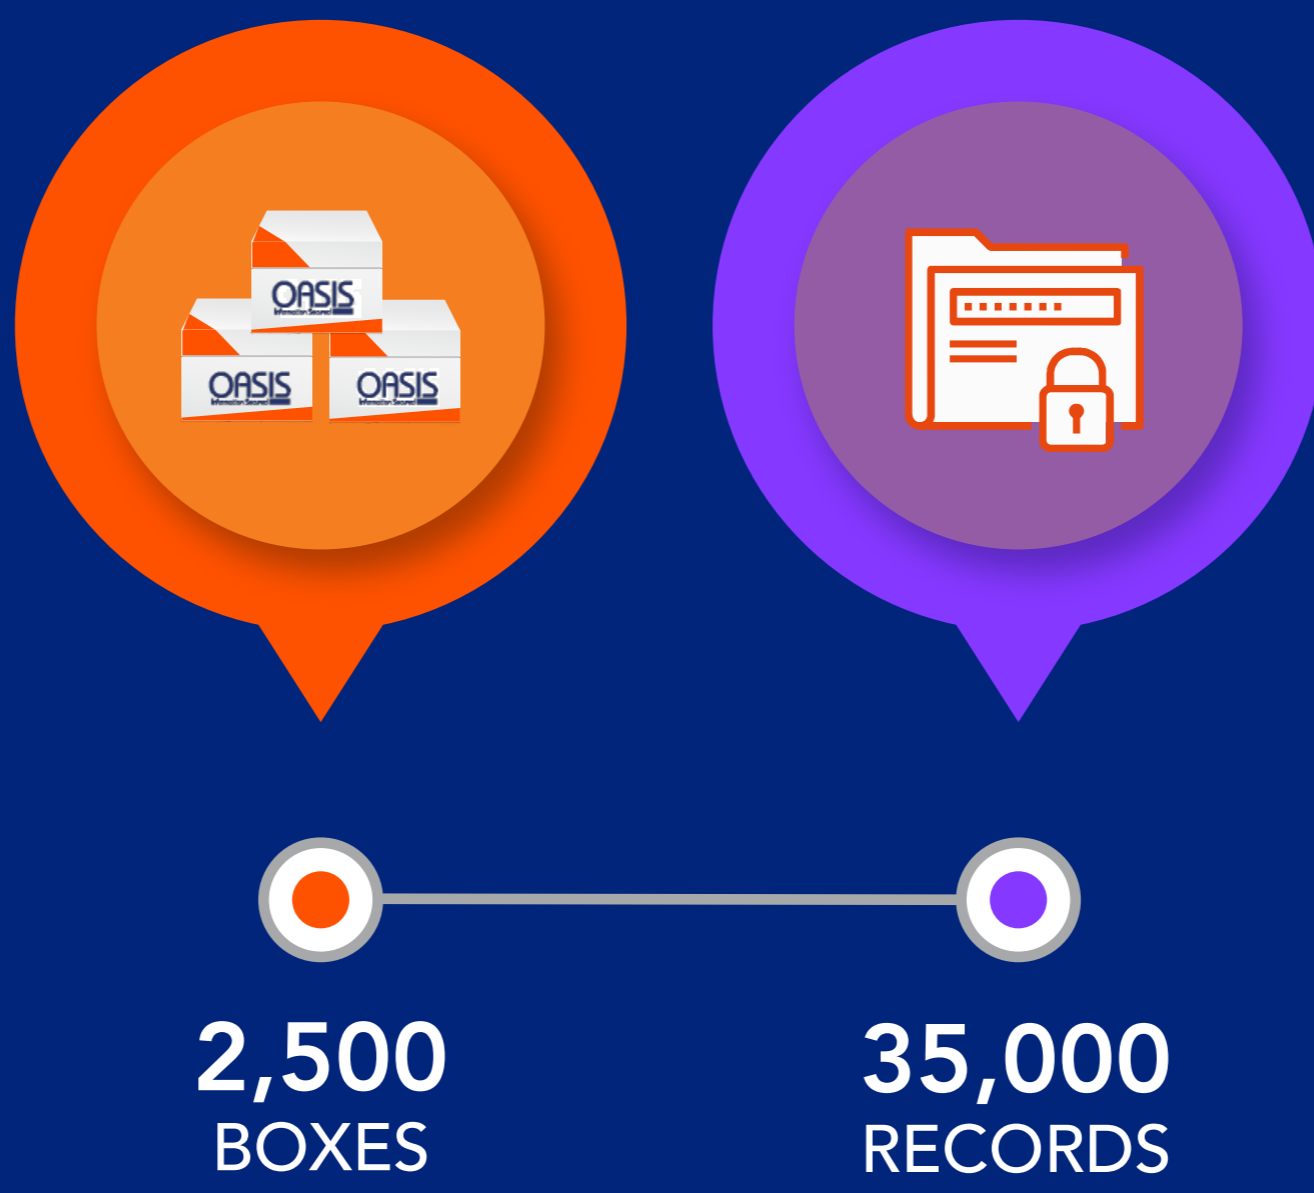

### Rationalise and Digitise to reduce costs and enhance data value

A leading energy company, operator of several assets in the UK's North Sea, was exploring options to complete a field decommissioning project without losing any high value data from the physical records. The organisation did not want to mark the end of the asset's data management activities. Instead, they needed a specific 'end of life' data management strategy to keep that data available knowing it could be invaluable to future energy Transition activities.

## SOLUTION

Working with the client, OASIS were able to retrieve and rationalise the records, delivering a robust and cost-effective solution that transformed access to high-value data and information, whilst minimising future costs

## BENEFITS

### Data INDEXED & RETAINED

-  Quick retrieval  
Findable and quickly retrievable via our Plexus UI
-  Security  
Secure storage environment operated by industry experts
-  HSE  
Certified Quality, Health and Safety and Environmental practices

### Data DIGITISED

-  Supports remote working  
Accessible anytime, anywhere – retrieval times reduced to seconds, not weeks
-  Compliance  
Ready for National Data Repository (NDR) submission to fulfil regulatory obligations
-  Traceability  
Opportunities to employ ML/AI to classify, geo-reference and for contextual search

### Data DESTROYED

-  Reduce costs  
Decrease costs and reliance on physical storage
-  Environmentally friendly  
Reduce your carbon footprint by digitising your records
-  Free up office space  
Clear store rooms by digitising your physical records and filing cabinets
