

# Secured at every level

## Your information journey

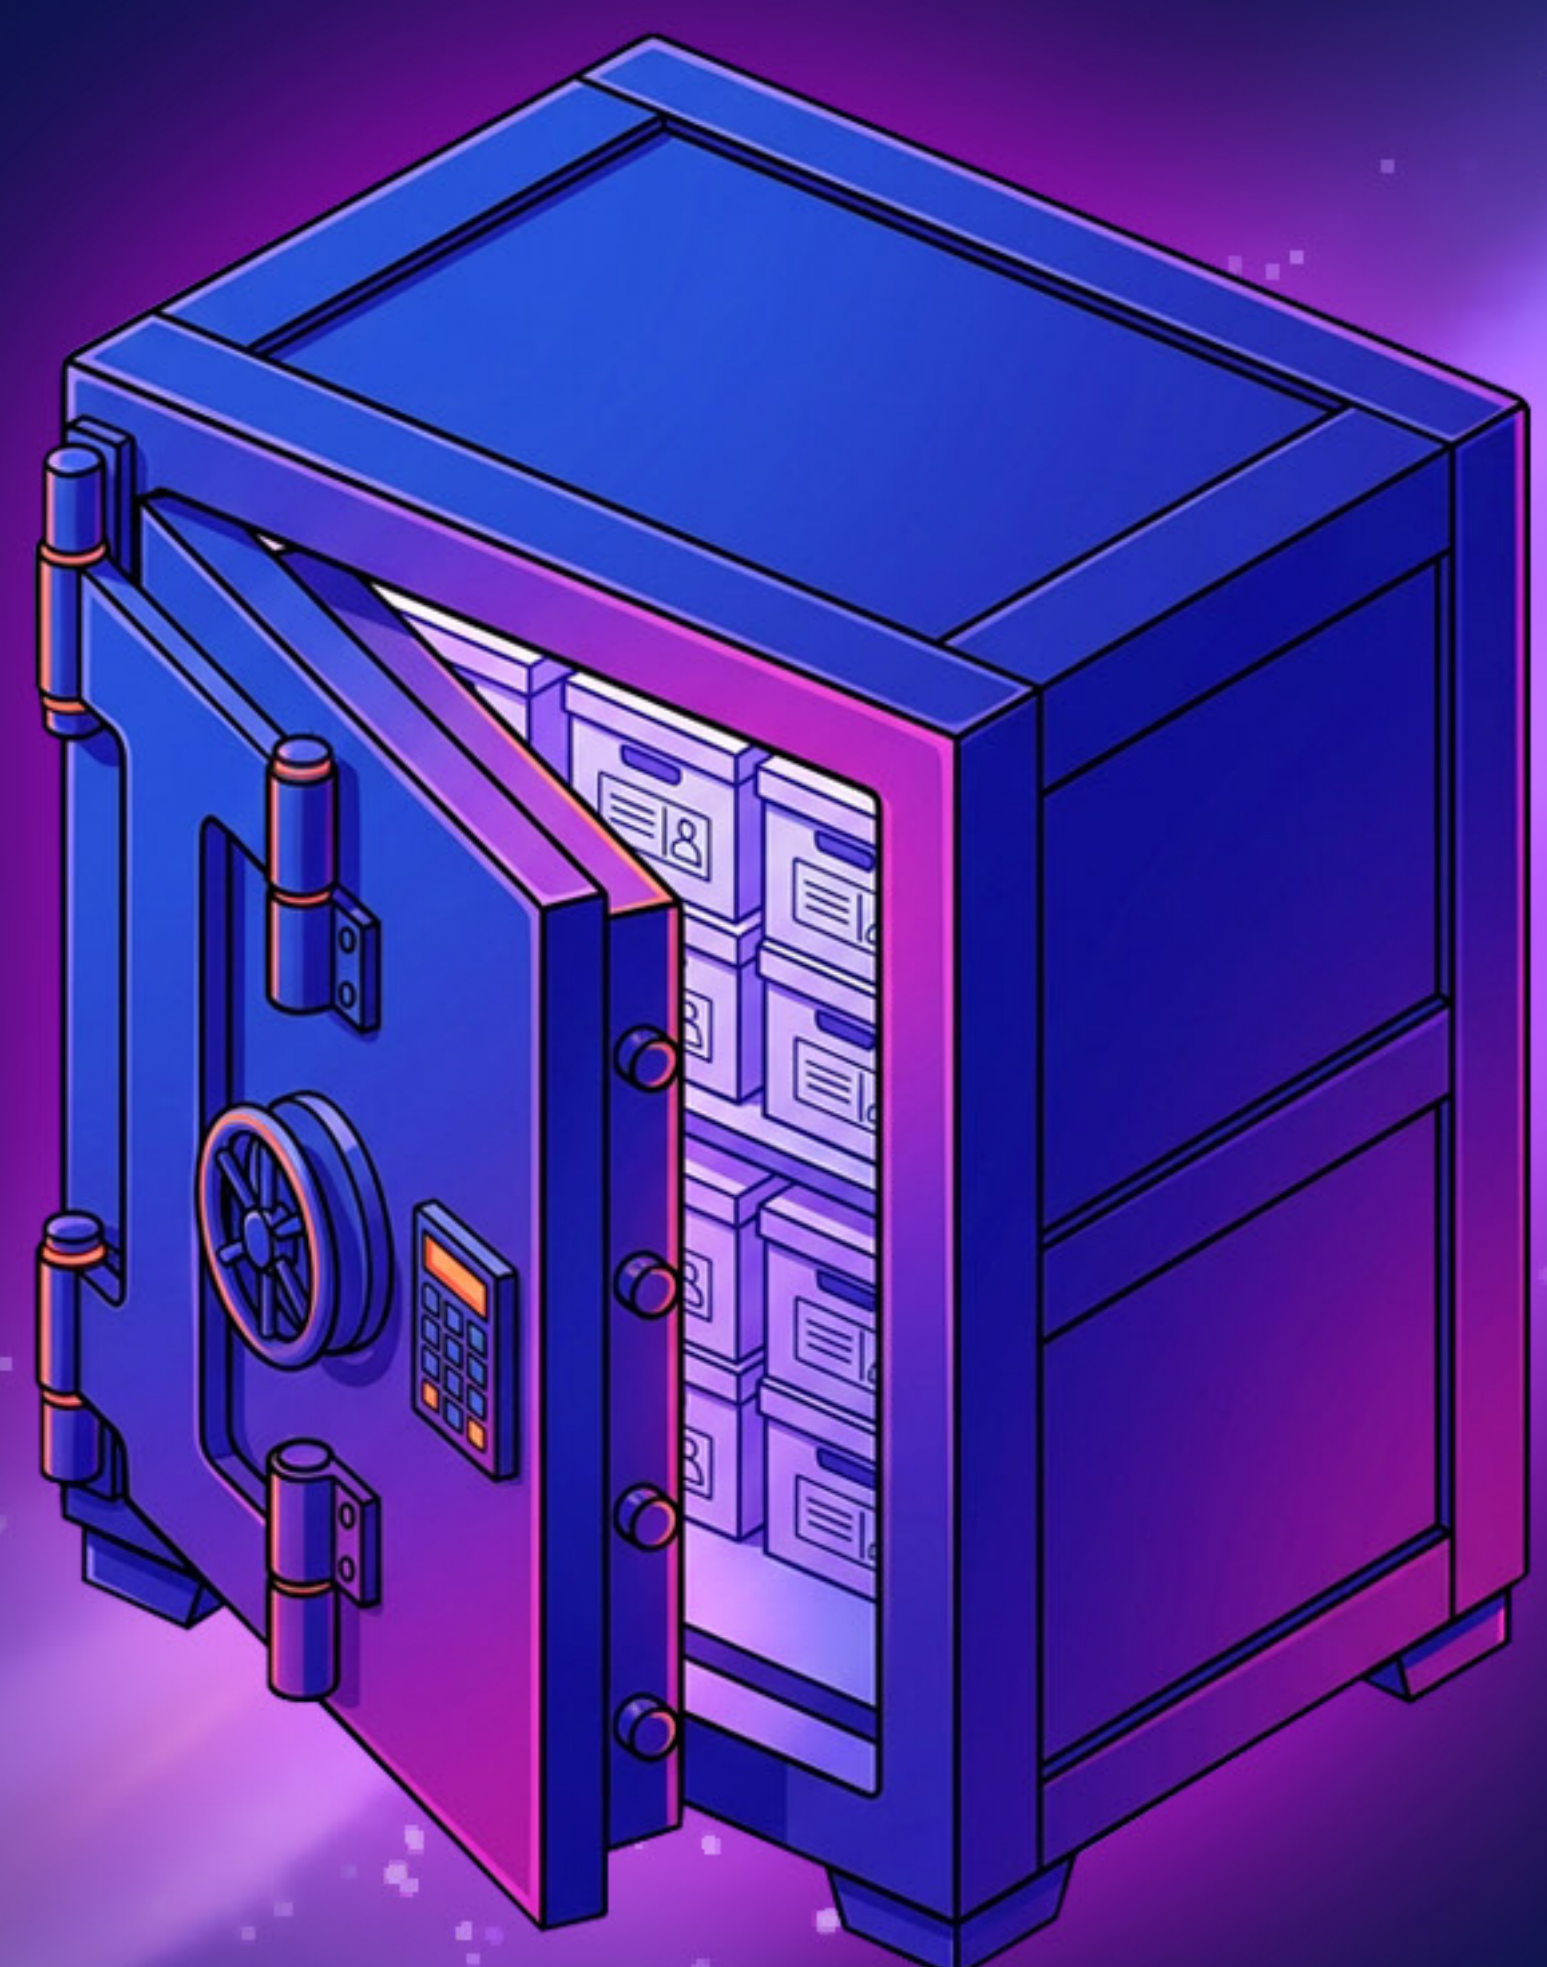

1

THE FOUNDATION

### Physical archive storage

Secure, compliant storage of offline business continuity plans, contracts, and critical records.

When hackers strike, paper doesn't crash. Physical printed documents sitting in a secure vault are completely untouchable by cyber criminals.

2

THE BRIDGE

### Document Scanning

Enabling digital transformation while maintaining governed, resilient records.

Digitisation only counts if it's compliant. We convert legacy archives and incoming documents with strict specifications and audit trails that hold up under regulatory scrutiny.

3

THE DIGITAL HUB

### FileSmart

Recurring digital access, governance, and audit readiness for hybrid teams.

Collaboration shouldn't mean compromise. FileSmart provides the flexibility your team needs alongside the access controls, version management, and audit trails regulated industries require.

4

THE SAFETY NET

### Tape & Media Storage

Proven offline backup for recovery when digital systems are compromised.

Cloud-only disaster recovery has a fatal flaw because ransomware can reach it. An air-gapped tape sitting offsite is one of the very few things a cyberattack genuinely cannot touch.

5

CLOSING THE LOOP

### Secure Destruction

Keeping data you're no longer entitled to hold is a compliance risk.

Certified, documented secure destruction of paper and media closes the loop and gives you the evidence trail to prove it.
